**Inservice Presentation: Femoroacetabular Impingement Syndrome (FAI)**

### **Objectives**

1. Understand the morphologic condition of FAI, including classification/types, causative factors, and the concerns of FAI leading to further joint damage.
2. Develop a better understanding of the clinical presentation for FAI along with typical objective findings.
3. Identify appropriate conservative management techniques.
4. Appreciate the different surgical intervention techniques and which is preferred, particularly for the active individual.
5. Understand the basic outline for physical therapy using the post-operative protocol.
6. Recognize the multitude of diagnoses for hip/groin pain and understand the differentiating factors for those listed in the presentation.
