

A photograph of a man in a grey polo shirt and tan pants stretching his right arm forward, bent at the elbow. He is standing in what appears to be a gym or fitness center. In the background, a woman in a blue top is partially visible, also engaged in some activity. The overall tone of the image is professional and health-oriented.

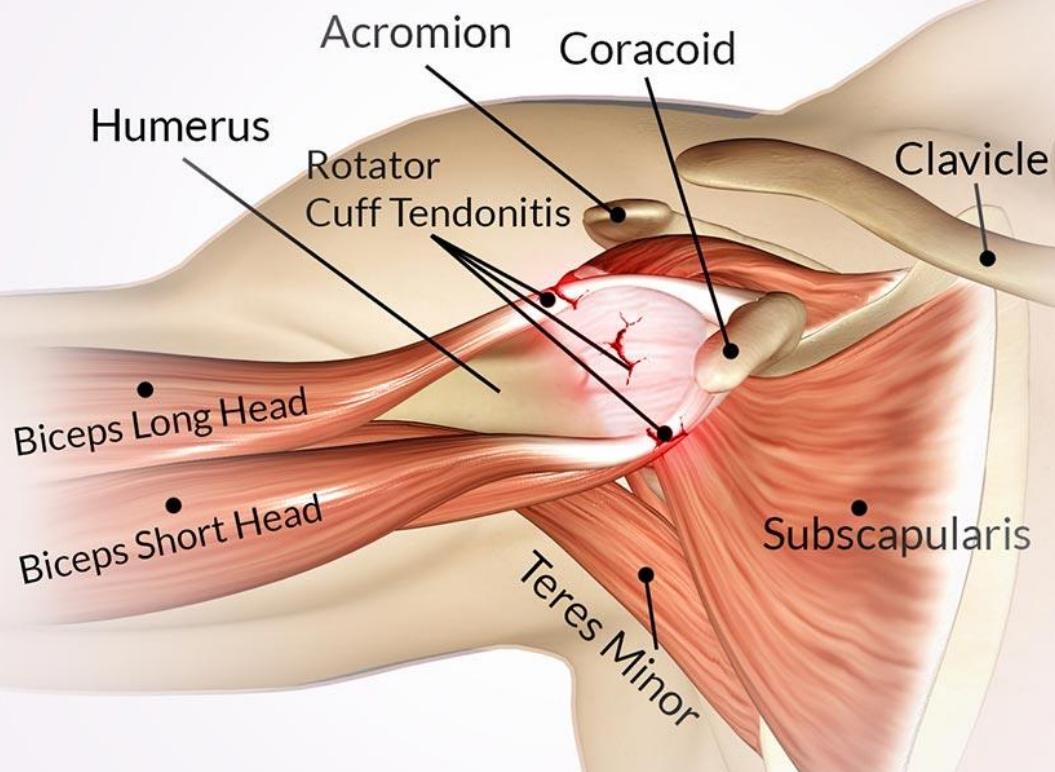

Subacromial Impingement Syndrome: Biomechanics, Pathology, Diagnosis, and Treatment

Jeremy Bradford
UNC-Chapel Hill, SDPT Class of 2018

Shoulder Pain

- 1/3 of all physician visits for MSK pain¹
- 2/3 of all shoulder pain is SIS²
- 9.7% of persons ≤20 y have RC tears³
- 62% of persons ≥80 y have RC tears³

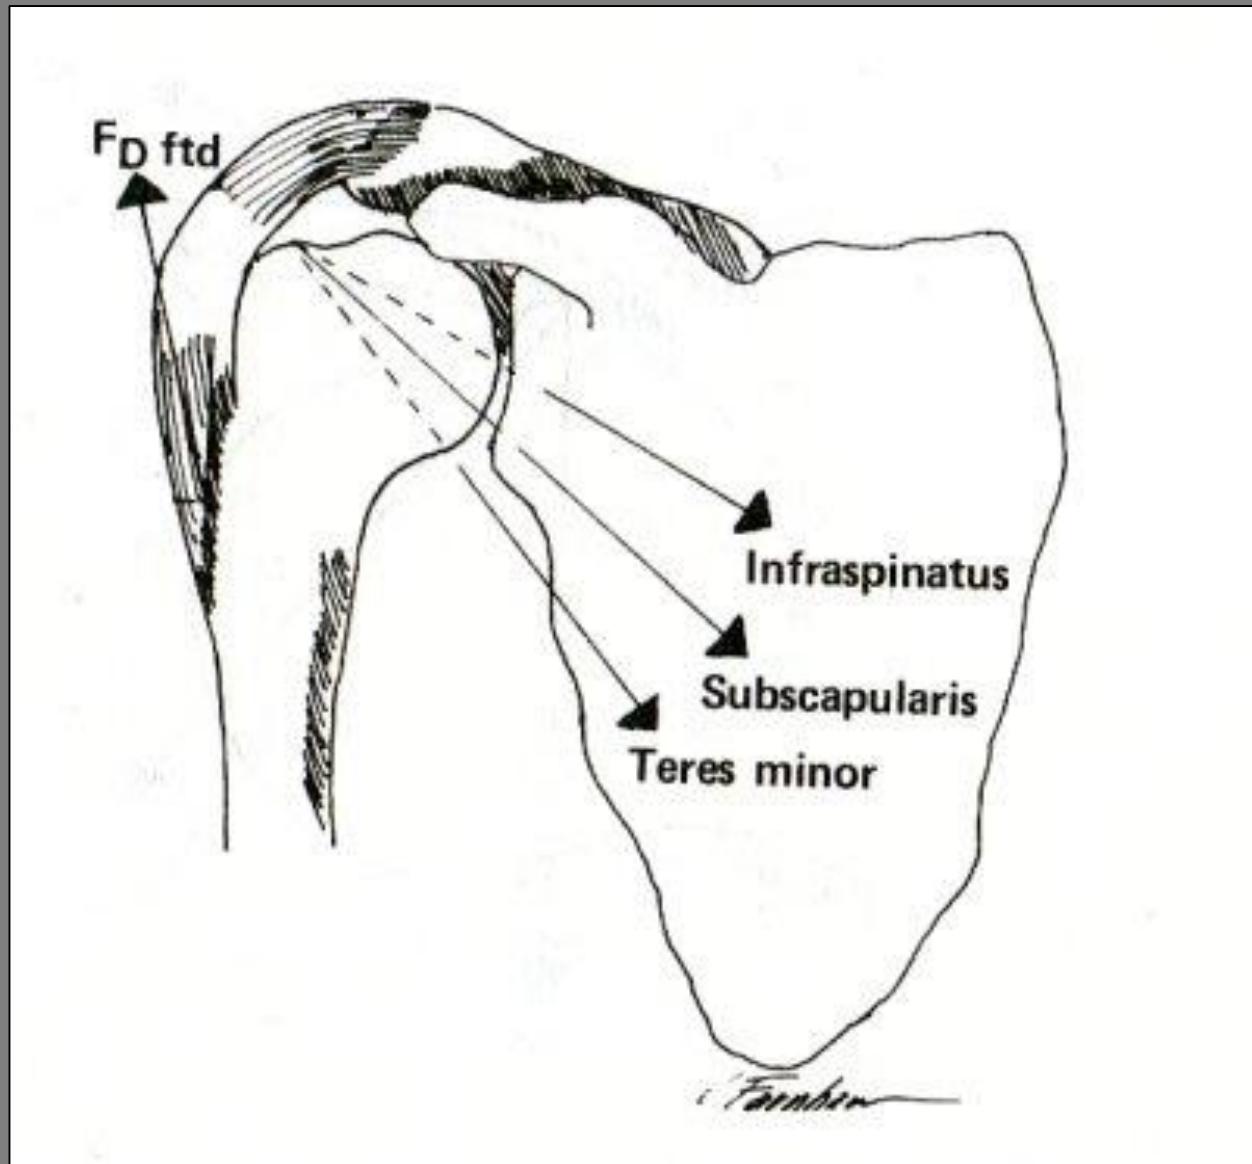

Impingement Syndrome

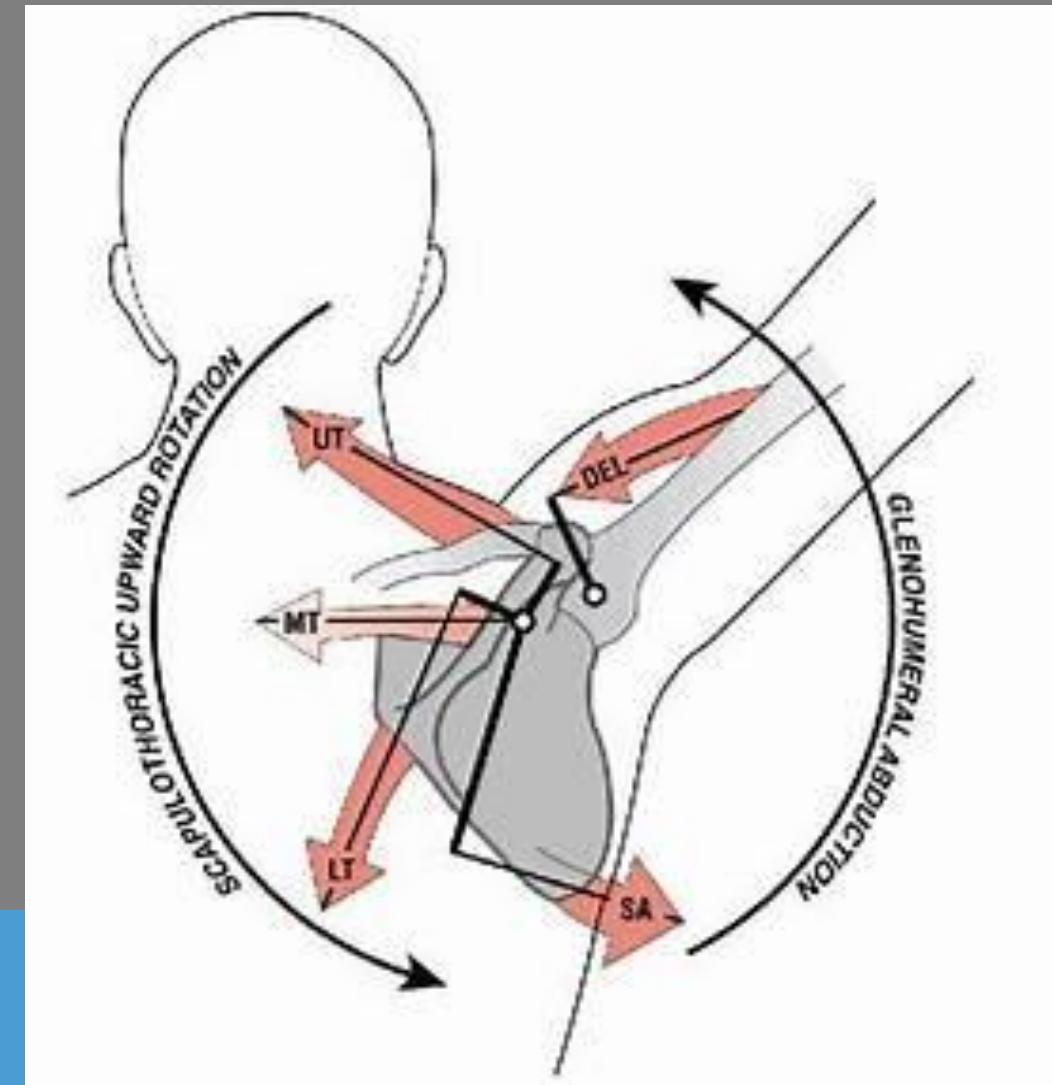

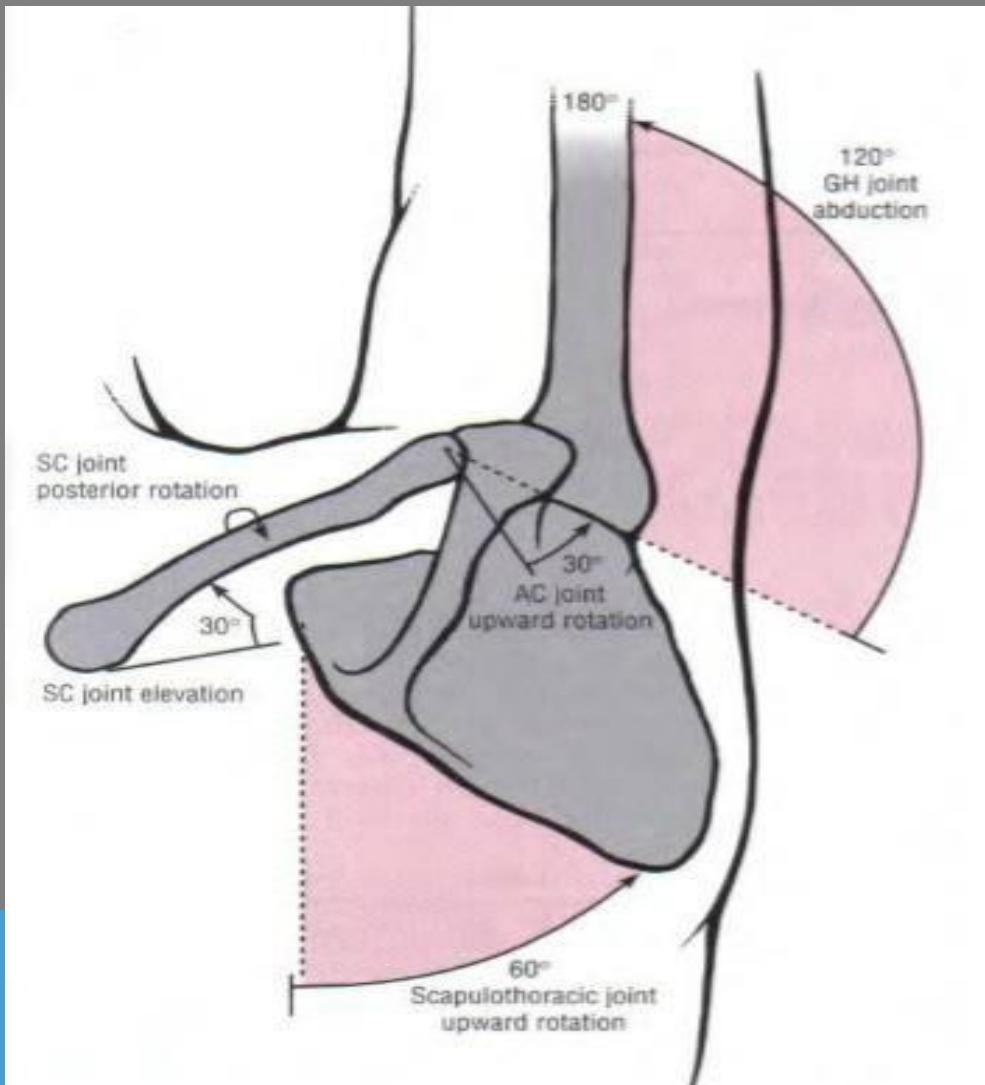

ePainAssist.com

- Subacromial space 10-15 mm
- Super margin
 - Acromion
 - CA ligament
 - Coracoid process
- Inferior
 - Bursa
 - RC tendons
 - LH of biceps tendon.
- Trauma, degeneration, or other disturbance to the relationship of these structures may lead to SIS.

Approximation of the humeral head to the glenoid by balanced force coupling moments between subscapularis and both infraspinatus and teres minor during early abduction.

Scapulohumeral Rhythm

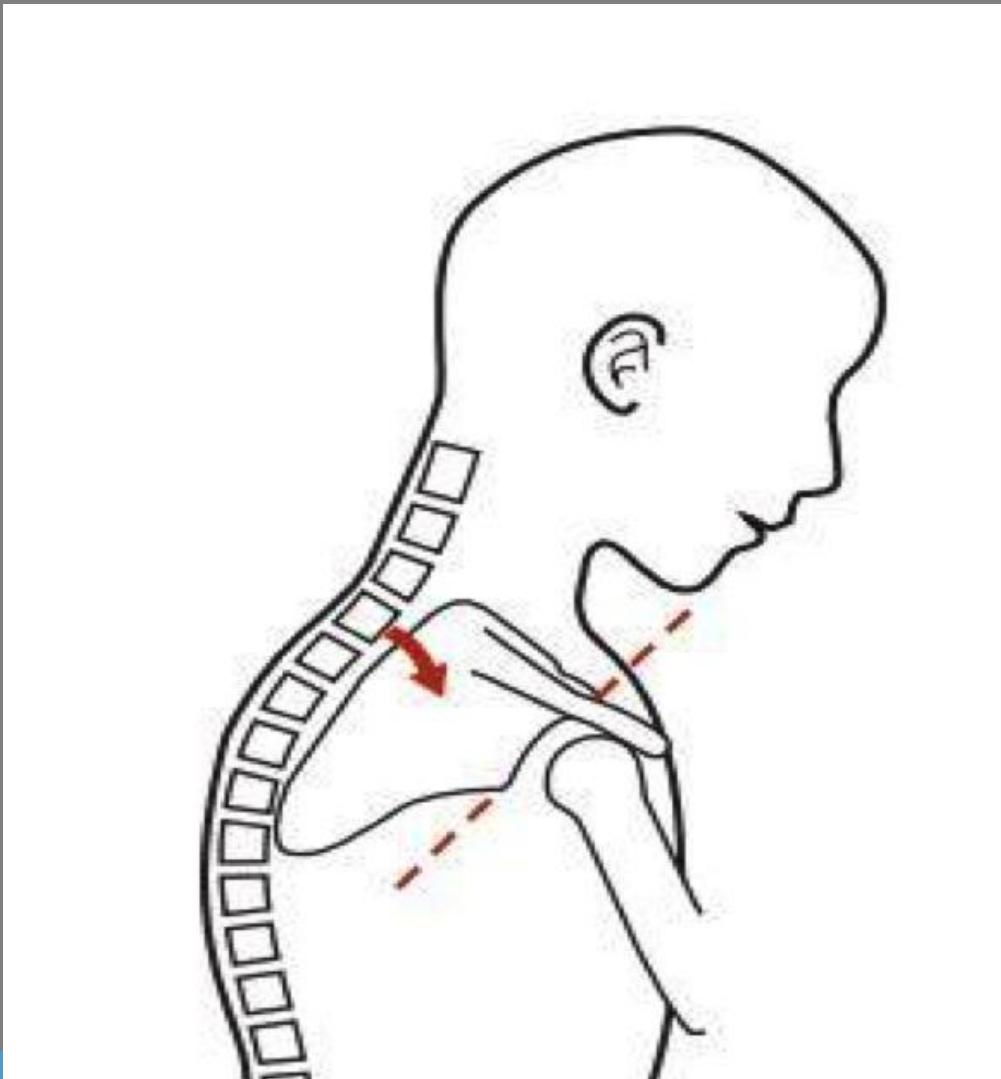

Pathology²

Extrinsic Compression

- mechanical compression
- acromion (type III)⁴
- muscular insufficiency⁵
- imbalances muscular⁶
 - force coupling
 - length-tension relationships
- Posture⁷
- Pec minor⁸

Intrinsic Degeneration⁹⁻¹¹

- tendon age
- avascularity
- tension overload
- overuse
- trauma

Risk Factors

- Overhead athletes and overhead work¹²
- Age of 40+ years (tendinopathy)⁷
- Age of 65+ years (intrinsic degeneration)^{3,7}
- Forward head posture^{7,13,14}
- Excessive thoracic kyphosis^{7,13,14}
- Type III, hooked acromion^{2,4}
- Weak/imbalanced shoulder muscles^{6,12}
- Scapular dyskinesia^{6,12}
- Unfavorable psychosocial status¹⁵

Diagnosis and diff dx

- History
- Normal PROM
- Painful Arc (60° and 120°)
- Weak ER
- Scapular dyskinesia (?)
- Special Tests
- acromioclavicular joint injury
- bicipital tendonitis
- brachial plexus injury
- cervical disc injuries
- cervical discogenic pain syndrome
- cervical radiculopathy
- cervical spine sprain/strain injuries
- clavicular fractures
- contusions
- myofascial pain
- osteoarthritis
- shoulder dislocation
- SLAP lesions
- suprascapular neuropathy
- thoracic disc injuries
- thoracic discogenic pain syndrome
- thoracic outlet syndrome

Special Tests^{1,15}

Hawkins-Kennedy

Neer

Painful Arc

Empty Can

Resisted ER

Yocum's Test

Drop Arm Test

Lift-Off Test

CELR¹⁶

Table 1. Interrater Kappa Reliability Coefficients and Agreements of 5 special tests for subacromial impingement syndrome.¹

Test	Kappa Coefficient (95% CI)	Percentage Agreement
Hawkins-Kennedy	.39 (.12–.65)	69
Neer	.40 (.13–.67)	71
Painful arc	.45 (.18–.72)	73
Empty can (Jobe)	.47 (.22–.72)	76
External rotation resistance	.67 (.40–.94)	87

Table 2. Diagnostic Accuracy of Subacromial Impingement Shoulder Tests¹

Test	Sensitivity (95% CI)	Specificity (95% CI)	+LR (95% CI)	-LR (95% CI)
Hawkins-Kennedy	.63 (.39–.86)	.62 (.46–.77)	1.63 (.94–2.81)	.61 (.31–1.20)
Neer	.81 (.62–1.0)	.54 (.38–.69)	1.76 (1.17–2.66)	.35 (.12–.97)
Painful arc	.75 (.54–.96)	.67 (.52–.81)	2.25 (1.33–3.81)	.38 (.16–.90)
Empty can (Jobe)	.50 (.26–.75)	.87 (.77–.98)	3.90 (1.50–10.12)	.57 (.35–.95)
External rotation resistance	.56 (.32–.81)	.87 (.77–.98)	4.39 (1.74–11.07)	.50 (.28–.89)

Physical Therapy

- Patient education^{17,18}
- Manual therapy¹⁹⁻²¹
- Exercise therapy²¹⁻²⁷
 - Stage I-IV
 - ROM
 - Pec minor
 - Scapular stabilization
 - RC strengthening
 - Parameters
